Executive Summary Report

Automated load test report and summary for test debounce mode test (19/04/2023-20:57:37) in organization
mkhavari0120@gmail.com

EXECUTIVE SUMMARY

debounce mode test (19/04/2023-20:57:37)

✓ PASS

Status: **PASS**
 Created: 19 Apr 2023 at 19:21
 Started by: mkhavari0120@gmail.com
 VUs: 10 VUs
 Duration: 1 min 30 sec
 Load zones:

Max Throughput
13 reqs/s

HTTP Failures
0 reqs

Avg Response Time
274 ms

95% Response Time
347 ms

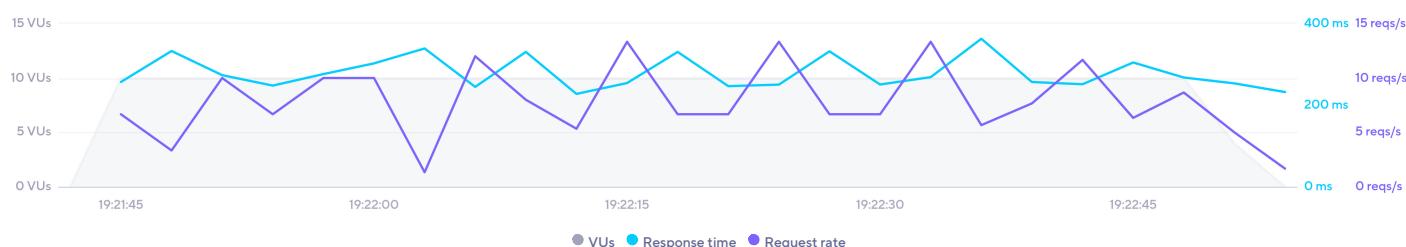

SUMMARY

This report summarizes a test run of the test "debounce mode test (19/04/2023-20:57:37)". It was performed on April 19, 2023 and is considered to be successful.

The test was configured to run up to **10 VUs** for 1 minutes 30 seconds. A total of **560 requests** were made with a max throughput of **13 reqs/s**. The sections below give a more detailed breakdown.

PERFORMANCE OVERVIEW

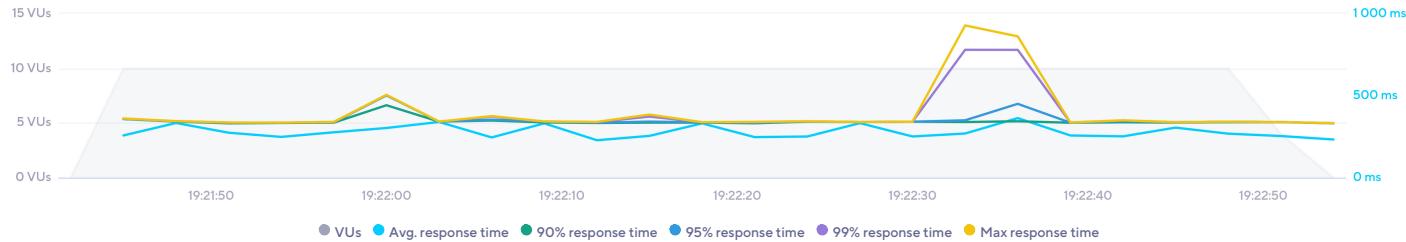

The average response time of the system being tested was **274 ms** and **560 requests** were made at an average request rate of **7 requests per second**.

TEST OVERVIEW

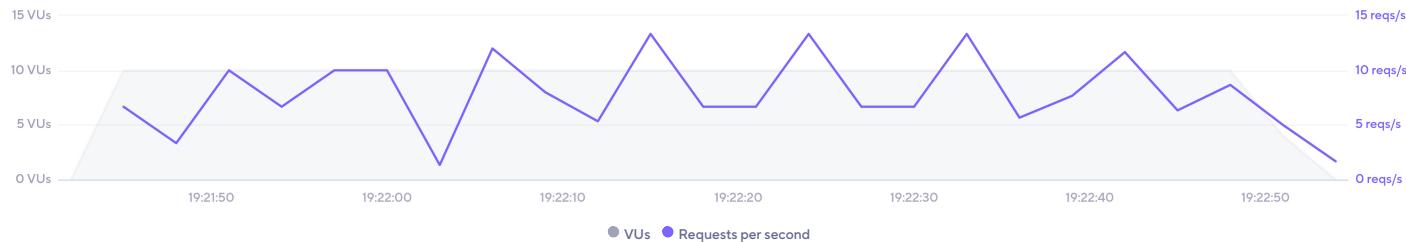

RESPONSE TIME

The maximum response time was **928 ms** at **10 VUs**. The average response time at the same point in time was **269 ms**, with 95% of requests taking less than **349 ms**.

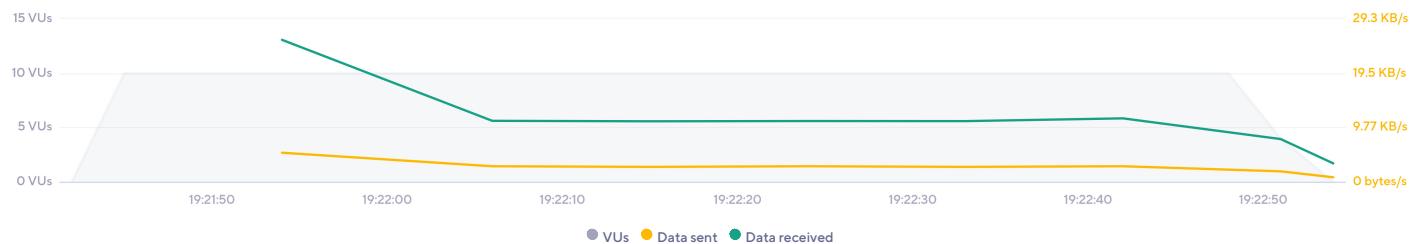

THROUGHPUT

The test had an overall average request rate of **7.5 reqs/s** peaking at **13 reqs/s** while running **10 VUs**.

BANDWIDTH

The amount of data sent peaked at **10 VUs**, sending **5.21 KB/s** of data. Data received had its peak at **10 VUs** with **25.5 KB/s** being received.

SLOWEST REQUESTS

There were requests to 5 unique URLs, with 560 different responses received. The slowest response had an average response time of 342 ms.

URL	METHOD	STATUS	COUNT	MIN	AVG=	95%	99%	MAX
https://task-cloud-server.iran.liara.run/allSessions	GET	200	70	320 ms	342 ms	431 ms	504 ms	505 ms
https://task-cloud-server.iran.liara.run/updateUser	PUT	200	210	321 ms	341 ms	350 ms	532 ms	928 ms
https://task-cloud-server.iran.liara.run/	POST	200	70	321ms	330 ms	341 ms	341 ms	341 ms
https://task-cloud-server.iran.liara.run/updateUser	OPTIONS	204	140	159 ms	167 ms	172 ms	175 ms	384 ms
https://task-cloud-server.iran.liara.run/	OPTIONS	204	70	159 ms	165 ms	169 ms	176 ms	189 ms

VOCABULARY

VUs

A Virtual User is a simulation of a real user making requests to the system. Multiple VUs are executed concurrently to simulate traffic to the website or API.

Throughput

The amount of transactions the system under test can process, showing the capacity of the website or application.

Checks

A check is an assertion that the system under test behaves correctly, e.g. that it returns the correct status code. They do not halt the execution of the test, but acts as a pass/fail metric.

Response Time

The time from sending the request, processing it on the server side, to the time the client received the first byte.

Latency

The time that data sent or received spends on the wire, i.e. from the start of data being transmitted until all the data has been sent.

Thresholds

Thresholds are a pass/fail criteria used to specify the performance expectations of the system under test.

ABOUT k6 CLOUD

k6 helps engineering teams prevent system failures and quickly deliver best-of-class applications. Our cutting-edge load testing platform brings cross-functional teams together to prevent reliability and scalability issues so that every application performs well. Developers, operations, and QA teams use our tools to automate testing and test earlier in the development process to bring high-quality products to market faster.

For more than 20 years, we have consulted businesses about load testing. We have spent the past 12 years developing state-of-the-art load and performance testing tools. 6,000+ customers – including Grafana, Microsoft, Carvana, and Olo – run millions of k6 tests every month. For more information, visit <https://k6.io>.
